

ELIJA OWOICHO AGADA

Abuja • elijaagada@gmail.com • <https://github.com/agadscodes>

EDUCATION

LANDMARK UNIVERSITY

Bachelor of Science, Computer Science - Current CGPA: 4.35

Expected September 2028

SKILLS, CERTIFICATIONS AND OTHERS

Languages: Python, Javascript

Technologies/Frameworks: React, HTML, CSS

Tech: Git, Vscode, MS Office

EXPERIENCE

GOOGLE DEVELOPERS STUDENTS CLUB (LMU)

Member

NOVEMBER 2024 - PRESENT

- Engaged in peer learning sessions focused on algorithms, data structures, and software engineering fundamentals.
- Worked with peers to improve programming, debugging, and version control skills through hands-on practice.
- Participated in workshops and technical sessions covering web development, Python, Git/GitHub, APIs, and cloud technologies.
- Built small academic and personal projects to strengthen practical software development experience.

PROJECTS

● Amazon Clone Website (Front end):

Project Overview: Developed an Amazon website clone using HTML5, CSS3, and JavaScript, demonstrating proficiency in web markup, styling, and front-end interactivity while showcasing understanding of e-commerce platform structure.

Key Accomplishments:

- Built a responsive web interface replicating core Amazon features
- Implemented semantic HTML structure for accessibility and maintainability
- Created interactive functionality with JavaScript and professional styling with CSS3

Technologies Used: HTML5, CSS3, JavaScript

Repository: <https://github.com/agadscodes/Amazon-Clone>

● Facebook Clone Website (Front end):

Project Overview: Developed a Facebook website clone using HTML5 and CSS3, demonstrating proficiency in web markup and modern UI design while showcasing understanding of social media platform structure and layout patterns.

Key Accomplishments:

- Built a responsive web interface replicating core Facebook features
- Implemented semantic HTML structure for accessibility and maintainability
- Styled the interface with CSS3 for professional design and visual consistency
- Created a functional prototype demonstrating front-end development capabilities

Technologies Used: HTML5, CSS3

Repository: <https://github.com/agadscodes/Facebook-Clone>

● Country Finder Website (Front-End & API Integration)

Project Overview: Developed a dynamic country information discovery tool using asynchronous JavaScript and REST APIs, demonstrating proficiency in fetching real-time data, handling dynamic DOM manipulation, and building responsive, user-centric web applications.

Key Accomplishments:

- Integrated external REST APIs asynchronously to fetch, filter, and display comprehensive national data and flag graphics in real time.
- Implemented robust event listeners (including keyboard "Enter" key handling) to ensure a seamless, interactive user search experience.
- Designed a clean, mobile-responsive layout with standard CSS, managing complex UI visibility properties to smoothly display calculated results without layout conflicts.
- Built defensive error-handling logic to gracefully capture and manage failed API network responses (such as 404 errors) for improved user experience.

Technologies Used: HTML5, CSS3, JavaScript (ES6+, Async/Await, Fetch API), REST Countries API

Repository: <https://github.com/agadscodes/Country-Finder>

● CINEMAX | Search Movie & TV (Front-end)

Project Overview: Developed a dynamic movie and television discovery web application using HTML5, custom CSS3, and Vanilla JavaScript, demonstrating proficiency in asynchronous API integration, third-party library implementation, and responsive layout design.

Key Accomplishments:

- Built a fully responsive interface featuring an interactive "Now Playing" carousel powered by Swiper.js
- Utilized asynchronous JavaScript (async/await) to fetch and render real-time media data from an external API
- Implemented a unified search system with dynamic radio toggles for seamless filtering between Movies and TV Shows
- Designed structured layouts using modern CSS Flexbox and Grid for a clean, professional user experience

Technologies Used: HTML5, CSS3, Vanilla JavaScript (ES6+), Swiper.js, FontAwesome, External Media API

Repository: <https://github.com/agadscodes/Cinemax-Website>
